• recordings are shared between vooibiy and offline installation from now on - However, if an offline savegame folder already exists, you will need to delete that (back up any games!) before installation to make this work.

Changes in 5.8.1 (e):

- Included a new version of the "Hippo Mod" for Clash of the Hippo 5. The old version is now called CotH4
- Updated the offline Userpatch version to the Release Candidate (6268)

As always, the "letter" upgrades only affect the installer itself, not the game - If you already have 5.8.1, no need to reinstall.

You can either use the exe download (smaller file size, a bit more convenient to rerun the installation) or the zip download (May work better with antivirus software, also doesn't create an entry in your installed programs list). Otherwise, they work identically.
